

nature'sBio.

GENERAL BENEFITS

- Increases soil aggregate stability, aeration, and reduces erosion
- Increases water holding capacity and drought tolerance
- Organically complexes nutrients making them more available
- Stimulates plant root and top growth via natural growth hormones
- Substantially increases plant proteins, fiber and sugar content
- Helps maintain a complex food web for micro-organisms
- Improves health and vitality in livestock and poultry

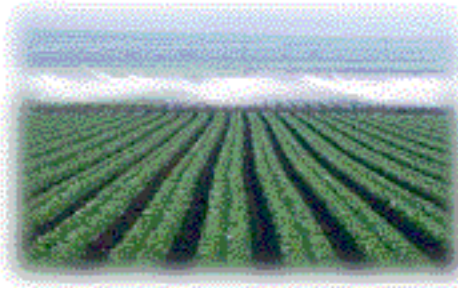

nature'sBio.

The Science of Nature

Our custom soil and plant testing is required to determine the best type of nutrient mix and application rate.

Nature'sBio® products are used as major components in establishing a well-balanced, Bio-Diverse, soil fertility program when the Biology, Chemistry and Physics are addressed. Our products are approved for Organic Farming by N.M.O.C.C. and we guarantee results! Let us set up your next program and see for yourself!

Our products are Approved for Organic Farming by The New Mexico Organic Commodity Commission

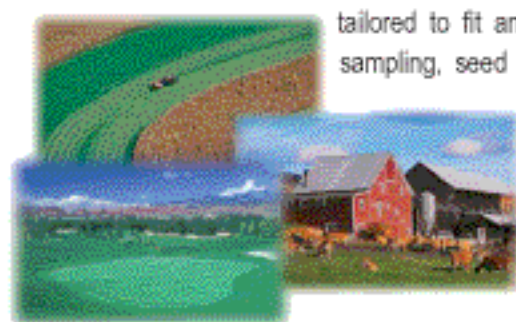

nature'sBio®
The Science of Nature

nature'sBio®

The Science of Nature

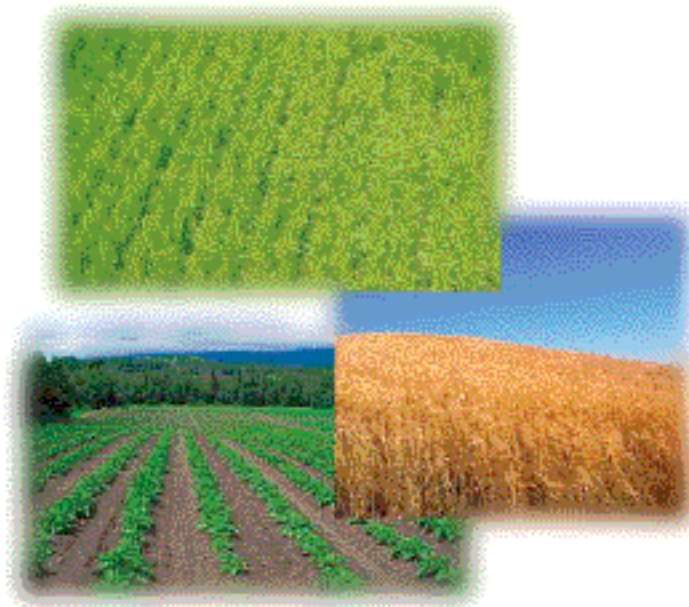

We work with nature's biodynamic balance blending elements of **Biology, Chemistry and Physics** to improve the living energetic force of life. **This is critical because our soil and water determine the health of our plants, animals and humans.** The environment determines the expression of the gene. A new paradigm is needed in our conventional agriculture and landscape care as our mineral-depleted soils have become critically poor in their bio-diversity and soil immunity. At **Organic Technology International**, we are compelled to restore environmental balance through nutrition, supporting the divine blue print, *The Science of Nature*. This will return the taste, and the energetic living force back to our food and environment.

Organic Technology International's exclusive **Nature'sBio®** product line introduces restorative synergy in soils, decreasing toxicity and increasing fertility. This mineral-rich organic program restores active carbon, minerals, and Bio-Diversity, which facilitates hosting beneficial bacteria, fungi, protozoa, algae, actinomycetes and many other micro-organisms. **Re-establishing the Bio-Diversity in the soil is the single most important step to creating healthy, abundant crops, improving field conditions and ultimately improving human and animal health.** This is especially important when facing decades of conventional agriculture practices that have destroyed the soil's Bio-Diversity. There are other concerns we will address in setting up a balanced, sustainable program based on our customized testing results. Our fertility programs can be tailored to fit any budget, with our soil sampling, seed and tissue testing, and field monitoring throughout the growing season, we guarantee improvements in field conditions.

nature'sBio.

Our Biological programs have over a decade of success stories around the world. From 50% plus increases in Rice production in Malaysia to growing healthier vegetation with 50% less water in United Arab Emirates, Australia, China, Kuwait, Mexico, Saudi Arabia and the United States.

Nature'sBio® custom biological inoculants are blended with rich organic liquefied extracts, which can be sprayed directly on soils and plants or blended in foliar mixes. Many of these liquids are injected into irrigation systems or dripped into flood irrigation. This accelerates the activity of the humus fraction in soil biology and increases plant nutrient uptake.

nature'sBio.

From our soil/plant testing, we custom blend your fertility programs with the use of Radionic-ELF Scanning, which will maximize the energy of your soil and plants.

nature'sBio.

Our de-mineralized soils produce poor animal feedstock. From our extensive soil and plant testing results, we have designed highly energetic feed supplements to greatly improve the immune system, health and vitality in your livestock and poultry.
